1. Which of the following is not an option for specifying a color in CSS3?　　**1/1 分**

   ⦿ binary

   ◯ rgba

   ◯ rgb

   ◯ color name

   ◯ hexadecimal

   > ✓ 正确

2. If your body tag uses the style attribute **style="text-align:center"**, you can overwrite that property by using the CSS3 rule.　　**1/1 分**

```
1 ▾ body{
2       text-align: left;
3   }
```

   ◯ True

   ⦿ False

   > ✓ 正确
   > The style attribute has a higher precedence so the browser will align the text to the left, not the center.

3. What is wrong with the following code?　　**1/1 分**

```
1 ▾ body{
2       color: #000000;
3       background-color:#FFFFFF
4       font-family: Times, Arial, Cursive;
5   }
```

   ⦿ There is a missing semicolon

   ◯ You can't style three properties in a single rule

   ◯ This is a valid rule

   > ✓ 正确

4. Assume the following rule is the only one that styles the body element:

1/1 分

```
1 ▾ body{
2       font-family: Cursive, Helvetica, Verdana;
3   }
```

What happens if the browser doesn't support Cursive or Helvetica?

○ The text will be displayed in Cursive

○ The text will not be displayed

◉ The text will be displayed in Verdana

✓ 正确
   The browser applies the first value that matches from left-to-right.

5. The browser defaults override rules specified in an external style sheets.

1/1 分

○ True

◉ False

✓ 正确

6. Using the code below, will the body of the page have the background-color defined in the file style.css or the background color define in the <style> tag?

1/1 分

```
1 ▾ <head>
2       <meta charset = "UTF-8">
3       <title>Test code</title>
4       <link rel "stylesheet" href = "style.css">
5 ▾     <style>
6 ▾         body{
7               background-color: #44CCDD;
8           }
9       </style>
10  </head>
```

◉ <style>

○ style.css

✓ 正确

7. Internal styling (rules specified in the <head> section) override rules specified with the style attribute in a tag.

1/1 分

○ True

◉ False

✓ 正确

8. The default display value for <a> element is: 1/1 分

- ⦿ inline
- ◯ inline-block
- ◯ none
- ◯ block

✓ 正确

9. The default display value for <span> is: 1/1 分

- ◯ inline-block
- ⦿ inline
- ◯ block
- ◯ none

✓ 正确

10. A block element takes up the full width of it's parent, even if the content is smaller than the parent. So two block elements at the same will not be side-by-side.   1/1 分

- ⦿ True
- ◯ False

✓ 正确

11. Inline elements take up the full width of the browser, even if the content is smaller than the browser size.   1/1 分

- ◯ True
- ⦿ False

✓ 正确

12. Which CSS3 property is used to center text? (Only provide the property name; do not give it a value.)   1/1 分

- ⦿ text-align
- ◯ center
- ◯ align

○ text-center

✓ 正确

13. Which of the following is the best way to convey that your text has special meaning?　　1/1 分

○ Using colors to signify the important text

○ Using a larger font size to signify the important text

○ Using a combination of font size and color to signify the important text

● Using semantic tags in addition to color and/or font.

✓ 正确
Yes! The semantic tags convey meaning that goes beyond appearance

○ text-center

✓ 正确
